

Temperature monitoring sheet

Heating Temperature Monitoring Sheet

Are the heating temperatures in your school set correctly? Use this sheet to make a record of the temperatures in each room.

The ideal temperature for school classrooms is 18°C, and 15°C for sports halls and corridors.

If temperatures are too high energy will be wasted and pupils may find it hard to concentrate.

Week starting (enter date): _____ Time temperature will be measured each day: _____

Room	Temperature Monday	Temperature Tuesday	Temperature Wednesday	Temperature Thursday	Temperature Friday

If temperatures are higher than 18°C in some parts of the school talk to your caretaker, site manager or business manager about turning down the school thermostat or individual radiators.
